

```
let isRequesting = false;
let requestCount = 0;

const scrollHandler = function(event) {
  const DOM = event.target;
  if(hasScrolled(DOM) > 0.9 && !isRequesting) {
    isRequesting = true;
    fetch('url...')
      .then(res => {
        // do something change view
        isRequesting = false;
        requestCount = requestCount + 1;
        if (requestCount === 3) {
          scrollView.removeEventListener('scroll', scrollHandler)
        }
      })
  }
}

scrollView.addEventListener('scroll', scrollHandler);
```

我們一定要寫
這麼醜的程式碼嗎？

我們需要寫

這魔西鬼的秘武石馬鳴嗎？
