

operator

● 1 個 function 傳入

observable

可觀

oldserivables

●可對元素作運算處理

observers

。具有 next, error,

complete

● 一個 object

• 用來訂閱 observable

```
import { from } from 'rxjs';
```

var sub = from([1, 2, 3])

```
import {map, filter} from 'rxjs/operators';
```

complete::() => {};

filter($x \geq x \% 2 == 0$)

$$\text{next}::x \Rightarrow \text{constOne}.\text{log}(x),$$

.pipe((

error::error=>{},

.subscribe()

map(~~x~~ => ~~x~~ + 1),

• 用來訂閱 observable

```
import { from } from 'rxjs';
```

var sub = from([1, 2, 3])

```
import {map, filter} from 'rxjs/operators';
```

complete :: () => {},

filter($x \geq x \% 2$ == 0)

next::x \Rightarrow const1e.1og(x),

.pipe()

error::error => {},

map(x => x + 1),
